Respected Sir,

Somaiya Vidyavihar is committed to the cause of Education, Community Service, Indian Culture and Research in Science and Technology. The K. J. Somaiya College of Science and Commerce was awarded "A" Grade by NAAC. The College was adjudged the Best College of the University of Mumbai in 2010 in the Urban category. The College has been conferred Autonomous Status from 2013-2014. The College was awarded FIST "O" level grant by DST, Star College Scheme by DBT and has recently awarded 'College with Potential for Excellence' by UGC.

It gives me a great pleasure in inviting you as a resource person for the Stereochemistry workshop organised by Department of Chemistry on 28th May, 2021 for our UG and PG students.

I am sure your expertise in the subject will enrich and enhance the competency of our students.

Thanking you,

Abstract

In search of new active molecules, a small focused library of the synthesis of 3-(trifluoromethyl)-1-(perfluorophenyl)-1*H*-pyrazol-5(4*H*)-one derivatives (**4a-d**, **5a-f**, and **6a-e**) has been efficiently prepared via the Knoevenagel condensation approach. All the derivatives were synthesized by conventional and non-conventional methods like ultrasonication and microwave irradiation, respectively. Several derivatives exhibited excellent anti-inflammatory activity compared to the standard drug. Furthermore, the synthesized compounds were found to have potential antioxidant activity. In addition, to rationalize the observed biological activity data, an *in silico* absorption, distribution, metabolism, and excretion (ADME) prediction study also been carried out. The results of the *in vitro* and *in silico* studies suggest that the 3-(trifluoromethyl)-1-(perfluorophenyl)-1*H*-pyrazol-5(4*H*)-one derivatives (**4a-d**, **5a-f**, and **6a-e**) may possess the ideal structural requirements for the further development of novel therapeutic agents.

1 | INTRODUCTION

The pyrazole ring is a prominent heterocyclic structural compound found in several pharmaceutically active compounds. This is because of its use in pharmacological activity and ease of synthesis. Furthermore, the selective functionalization of pyrazole with diverse substituents was also found to improve their range of action in various fields. Pyrazole containing heterocycles shows various biological activity, such as antibacterial,^[1] antifungal,^[2] antimicrobial,^[3] anti-inflammatory,^[4a] antioxidant,^[4b] insecticidal,^[5] antiviral,^[6] anti-nitric oxide

synthase,^[7] glycogen receptor antagonist,^[8] anticancer,^[9] antienzyme,^[10] immunosuppressant,^[11] anti-fatty acid amide hydrolase (FAAH),^[12] and liver-x-receptor [LXR] partial agonist activities.^[13]

Fluorine or fluorine-based compounds are of great interest in synthetic and medicinal chemistry. The position of the fluorine atom in an organic molecule plays a vital role in agrochemicals, pharmaceuticals, and materials^[14] as it changes the pharmacokinetic and pharmacodynamic properties of the molecule owing to its high membrane permeability, metabolic stability, lipophilicity, and binding affinity.^[15]
