**Attainment of the Programme Outcome**

Through the program of Geography, students empower themselves for environmental skills, grass Geographical concept and are able for Ground Survey, Village Survey. Learners used skills based Geographical Information System (GIS) and Geographical Position System (GPS). At the end of the program student can learn how to gain knowledge of changing climatic condition. This helps the students to take up practical work and compare the results with their assumptions, there by leading to accuracy and validity of the practical knowledge.

At the end of course, learners know, apply and understand the matters, skills and processes specified in the relevant programme of study. Learners are able to collect, analyze and communicate with a range of data gathered through experiences of fieldwork that deepen their understanding of geographical processes. They interpret a range of sources of geographical information, including maps, diagrams, globes, aerial photographs and Geographical Information Systems (GIS) and communicate geographical information in a variety of ways, including through maps, numerical and quantitative skills and writing at length. They also understand geographical similarities and differences through studying the human and physical geography of a small area identify seasonal and daily weather patterns, use world maps, atlases and globes to identify the globe and its countries, as well as the countries, continents and oceans. They are able to use simple fieldwork and observational skills to study the geography of their areas.
